

## List View Screen

Jack Meyer

The List View allows users to view “games” near them in a list format. This screens after the user has navigated to the games section of the app (either after signing on or through the navigation menu) and swipes right. On this page the user can access the navigation menu or the settings menu (1 and 2). They can select if they would like to go back to the map view (3) by swiping left. They can search for specific games (4) or they can filter the list with different filters with the filter bar (5). They screen displays a list of games in their area (6). Each list includes a number of games (7). A game displays how many people are currently in the game, the title, the location, and the time of the game. They can click on the game for even more information. Lastly, the user can add a game if they wish using the “add game button” (8).

The Map View Screen allows users to view “games” in their area on a map. This screen is the first screen that appears after the user has signed in, or has navigated to the “games” part of the navigation menu. On this screen the user can access the navigation and settings menu (1 and 2). The pins (3) show where the games are being played. If the user clicks on the pin they can see a brief description of that game. The map (4) is a view of the area the user is in. The user can add a game if they so choose by clicking the “Add a game button” (5). Lastly, if the user doesn’t like the map view they can swipe right on the view select (6) and view the games as a list.
