

The Nav-Bar Side Menu View allows the user to navigate to the most important features and pages of this app. The user will be able to access this side menu from any page in this app by pressing the button with three bars at the top left of the screen. 1) The first button lets the user navigate to the home map screen from anywhere in the app, if user is already at the home screen then the page will refresh. 2) When the Profile Button is pressed the user is sent to their profile page where they have the option to change their player information and their profile picture. 3) Next, clicking the Friend Button sends the user to their current list of friends, from that list they can view the profile of any of friends by clicking on their names. 4) By pressing the Events page user goes to a list of all Events that the user is currently a part of. User can view Event page of any Event on that list by clicking on it. 5) Clicking Messages button takes the user to a page with all the users Peer to Peer messages on it. 6) The Achievements Button takes the user to another page where all of their achievements and when they got them, can be viewed. 7) Finally, The Discover Page takes user to a page where the app suggests Events that may interest the user.

The Misc. Side Menu provides a convenient way of accessing all the peripheral functionalities that don't impact main functionality of the app itself, but are necessary for a well designed app. Similar to the Nav-Bar Side Menu, the user will be able to access this menu from anywhere in the app by tapping the three circle at the top right of the screen. 1) When the logout button is tapped a message will pop up asking the user if he is sure he wants to logout, if yes the app will log off of the current user's profile. 2) Pressing the Help Button will navigate the user to a page detailing how the app works and all of its functionality. 3) The settings button will take the user to another page where they can change settings such as, privacy, push notifications, cellular data use, and more. 4) If the user experiences some kind of bug or problem with the app, pressing the Contact Button will take them to contact form where they will be able to let the developers know about their concerns.
